

EIOPA Insurance and Reinsurance Stakeholder Group

Eva van der Vorst

As Chief Actuary at NN Group, I am responsible for the Actuarial Function and overall actuarial policies across the Group, reporting directly to the CFO and CRO of NN Group. With over 15 years of experience in the insurance industry, I have extensive knowledge and expertise on the sector with a focus on finance, risk and actuarial.

I started my career in 2008 as a trainee of ING Group (then mother company of NN Group). Since then I have had various roles with increasing responsibilities in the fields of capital modelling, investment management, capital management and corporate finance. From 2015-2017, I was responsible for the Solvency II internal capital model as head of risk models.

In my role I have been fully involved in the impact of the current 2020 Solvency II review; I believe this expertise is of interest to the IRSG as level 2 standards will still be developed. Further, I am a member of NN's Climate Risk Steering committee and responsible for the framework to assess various aspects of climate risks related to our underwriting/insurance liabilities. Also I participate and contribute to an internal strategic project to streamline operational processes (including finance and risk processes), by using advanced data techniques and artificial intelligence.

I hold an MSc in Quantitative Finance from Tilburg University, an BSc in Industrial Engineering from Eindhoven University of Technology, and an MBA from London Business School. I am a fully qualified member of the Dutch Actuarial Society.

Additionally, I am the co-chair of the European Chief Actuaries Forum and have participated in various working groups of the CRO forum.

With my extensive knowledge and experience, I am qualified to provide meaningful and in-depth input to the IRSG, and therewith to the shaping of the European Insurance sector.
